RESISTANCE WELDING & HANDLING ROBOT

Since the 50's, CEMSA has been increasing his reputation World Wide, as a Company synonymous of "Applied Technology", in the major core business of "Resistance Welding" & "Electrical Upsetting"

This recent application, in partnership with a top qualified manufacturer of special Roll Forming Lines, is a further demonstration of the leadership of the Company in offering customized solutions, at the highest levels, for the production of special profiles in the Automotive sector and precisely on the latest generation of electric SUVs

The key factor in this application is the perfect synchronization between the Roll Forming line and the

CEMSA seam welder, for welding bent profiles at those points established by the End User via "Profinet" bus communication, in accordance with the "Industry 4.0". This seam welder, powered by a full Medium Frequency package (MFDC), guarantees a consistent reduction in electricity consumption. The highest quality and repeatability on the Roll-Spots are guaranteed by the automatic dressing & cleaning of the welding wheels, as well as by the constancy of the working level through a laser control, which actuates the instantaneous lifting of the lower wheel.

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
